FAN JET 10-8, 15-8, 10-20-6

The water veil generated by these nozzles not only has a bizarre beauty, it is also extremely practical: It is particularly well suited to conceal exposed technology.

Depending on the installation the fan nozzles generate either a vertically ascending water veil, or a diagonally spouting water veil of 6 or 8 mm in thickness. Thanks to its large surface area the attractive water pattern can conceal a foundation base, or exposed pipe and pump equipment from the eyes of observers. The nozzles work independently of the water level and require a throttle valve to regulate the water pattern.

Product characteristics at a glance

- 6 mm or 8 mm thick, fan-shaped water gushing effect
- Water-level independent
- Modern stainless steel look
- Suitable for Multi Directional Drive II / DMX / 02 (50524)
